

Goals and progress

Emissions

Apple 2030 is our science-based commitment to achieving carbon neutrality for our entire carbon footprint, including transitioning our entire value chain to 100 percent clean electricity.⁵

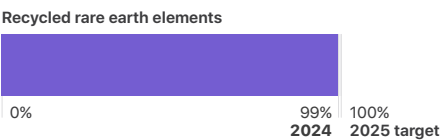

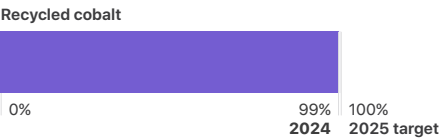

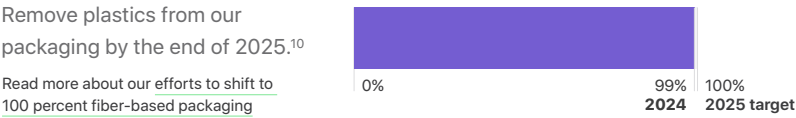

Materials

We’re committed to one day using only recycled or renewable materials in our products and packaging, and to enhance material recovery.⁷

Transition to 100 percent recycled cobalt, tin, gold, and rare earth elements in select components and applications by the end of 2025.⁸

- Gold plating in all Apple-designed rigid and flexible printed circuit boards
- Tin soldering in all Apple-designed rigid and flexible printed circuit boards
- Cobalt in all Apple-designed batteries⁹
- Rare earth elements in all magnets

Resources

We’re committed to stewarding water resources and working to eliminate waste sent to landfills.
